EDUCATION

AUCKLAND UNIVERSITY OF TECHNOLOGY | FEB 2025 - EXPECTED NOV 2027

Bachelor of Computer and Information Sciences

Cumulative GPA: 7.66 / 9.0

Major in Computer Science; Minor in Software Development

Relevant Coursework: Object Oriented Programming, Data Analysis, Mathematical Concepts, Data Structures, Algorithm Design, Graphics Programming

EXPERIENCE

FULL-STACK DEVELOPER | WEB DEVELOPMENT CONSULTING CLUB(WDCC) | APR 2026 - PRESENT

- Collaborate with a team to build a website for the client Studio Rapture using React, TypeScript, Tailwind CSS, Payload CMS and MongoDB
- Translate designs into clean, reusable React components and integrate them into a responsive homepage layout, contributing to code reviews and iterating on feedback
- Configure and manage content in Payload CMS, including setting up users and structuring data for the site to fetch and display

DISPATCH & PRODUCTION TECHNICIAN | PHYTOMED / KIWIHERB | MAR 2024 - SEP 2025

- Managed end-to-end dispatch operations including labelling, packaging, and shipment of customer and wholesale orders, while using SAP to track stock movement, process purchase orders, and maintain accurate inventory records
- Performed quality control and stock rotation checks to maintain compliance with company standards and ensure product accuracy before shipment

PROJECTS

PREP | FOUNDER & PRODUCT LEAD

- Founded a five person team building an exam preparation app that generates syllabus-aligned quizzes, revision notes, and practice exams tailored to specific exam systems
- Leading product strategy and contributing to full-stack development using React, FastAPI, and Supabase, integrating AI APIs and coordinating across design, frontend, and backend to deliver a structured revision tool for secondary and university students

OVERTAKEJS | PERSONAL PROJECT

- Engineered a physics-based lap-time solver in Node and Express, deriving lap times from real car data via tyre grip, power and aerodynamic drag, then scaled it into a deterministic race engine simulating multi-car races at 50 ms resolution with overtaking, tyre wear and fuel burn
- Architected the full-stack app around it with a React front end with Vite, Tailwind and Framer Motion animating each race, JWT and bcrypt auth, and a collectible card system, all persisted in MongoDB

SPENDWISE | TEAM PROJECT

- Team-built web application that helps users track recurring bills and subscriptions, detect unused services, and get alerts before free trials end, built on Firebase, Express, React, and Node.js
- Handling full-stack implementation including authentication with Firebase Auth, frontend routing with protected pages, and backend services following a 3-tier architecture, with UI designed in Figma and styled using shadcn/ui and Tailwind CSS

SKILLS

Languages: Python, Java, C, JavaScript, TypeScript

Frameworks & Libraries: React, FastAPI, Express, Tailwind CSS, Payload CMS

Tools & Platforms: Node.js, Git, Firebase, Supabase, PostgreSQL, MongoDB
